

SR-INB-KIT1
Intratone Interactive Digital Bulletin Board with 15-inch Screen

Description

The Intratone Interactive Digital Bulletin Board is designed to make communicating with multiple occupancy building residents faster, easier, and more inclusive. Display important information, such as maintenance schedules or repair notices, as well as public health information and general announcements, via the secure remote online management system. Updated via the web, meaning that there is no need to visit the site! Create a message for some, or all of your Intratone interactive Digital Bulletin Board or boards across multiple sites, in just a few minutes using Intratone's secure remote online management site. Use your own files or preloaded templates for the notices, then either broadcast it or set a time for it to go live. Multiple messages can be uploaded to each Interactive Digital Noticeboard, with tenants able to scroll through them using the display buttons. The Interactive Digital bulletin board's unique survey feature fosters inclusivity and a closer connection with residents. Facilities managers can pose questions to residents, with voting completed by placing their key fobs on the built-in proximity reader. Users without building-specific key fobs can vote too with the scroll keys and a contact-less or near-field (NFC) device such as a credit card, mobile phone or another type of key fob. Complete Intratone notice board kit consisting of one interactive interactive digital bulletin board, 4G transmission module, unlimited data synchronisation for 15 years (p/n INT-06-0208) and a Dycon D2403-A 24VDC 3A Power Supply (p/n DYC-D2403-A)

Product Specifications

Weight	0 kg
Brand	Intratec
Form-factor	Digital Notice Board
Operating-temperature	-20°C to 60°C
Protection-rating	IK08, IP52
Colours	Dark Grey
Power-requirement	24 VDC
