

VBB-RI

Vanderbilt Bright Blue & Lite Blue Network Reader Interface

Description

The VBB-NRI Network Reader Interface connects to a card reader via Wiegand protocol, and then over the TCP/IP network to the VBB bright blue? or lite blue? controller.

The VBB-RI is compatible with proximity, smart card, biometric, magnetic stripe, barcode and Wiegand reader technologies. Includes a NEMA-1 rated metal enclosure.

This IP-based reader interface is perfect for remote locations where wiring can be a challenge. The VBB-NRI connects to the controller board via your network, allowing you to bring remotely located readers online with your bright blue? or lite blue? access control system.
