

SRB-YNL-200H

YD30 motorised double action side-load lock for swing-through and single swing doors

**Description**

The YD30, known as the Cobalt is a revolutionary low voltage motor driven door lock for 180° swing doors. It has been designed to secure double acting doors and addresses two of the biggest issues in door locking; 1) the ability to align a misaligned door and 2) the ability to release when requested - even with excessive load on the door. The Cobalt is typically used in commercial doors and controlled by access control systems. This gives the user the ability to control access in and around a facility and provide traffic reports when desired. In addition, the Cobalt can be used in a simpler system where just controlling access to a single door can be implemented with a stand-alone access system. Seeing is believing! Take a look at the video below showing the actual operation of Cobalt:

#### Product Specifications

Weight	600 kg
Brand	BQT Solutions
Material	Stainless Steel
Mounting	Flush Mount
Voltage	12-24 VDC
